[Submit Abstract](#)

Research continually expands the evidence base related to the assessment, diagnosis, and management of patients with aortic disease. In addition, new technologies and new devices are expanding our understanding of the causes and options for therapy available. These include improvements in medical, hybrid, endovascular, and conventional open surgical repair, which represent the current mainstay of treatment for aortic disease. The pace of acquiring new knowledge about these conditions makes it difficult for busy practitioners and surgeons to remain up to date in their clinical practice. This interdisciplinary case based activity will provide an in-depth review and analysis of current state-of-the-art practices in the management of patients with aortic disease. The program is designed to engage learners in debates, discussion, and clinical decision making to share best practices with expert faculty from some of the world's leading multi-disciplinary aorta centers.

Course Directors:

Francis Caputo, MD

Staff, Department of Vascular Surgery; Vascular Surgery Director, Aorta Center

Sydell and Arnold Miller Family Heart and Vascular Institute

Cleveland Clinic

Milind Desai, MD

Director of Clinical Operations, Department of Cardiovascular Medicine; Cardiology Director, Aorta Center

Sydell and Arnold Miller Family Heart and Vascular Institute

Cleveland Clinic

Sean Lyden, MD

Chairman, Department of Vascular Surgery

Sydell and Arnold Miller Family Heart and Vascular Institute

Cleveland Clinic

Venu Menon, MD

Section Head, Clinical Cardiology, Director, Cardiac Intensive Care Unit
Sydell and Arnold Miller Family Heart and Vascular Institute
Cleveland Clinic

Eric E. Roselli, MD

Chief, Adult Cardiac Surgery, Department of Thoracic and Cardiovascular Surgery; Cardiac Surgery Director, Aorta Center
Sydell and Arnold Miller Family Heart and Vascular Institute
Cleveland Clinic

Meeting City and State: Cleveland, OH

Abstract Deadline: Friday, August 6, 2021 to Friday, August 27, 2021
