Comprehensive Management of Lower Extremity Venous Disease

Comprehensive Management of Lower Extremity Venous Disease

Friday, October 4, 2019 to Saturday, October 5, 2019
Cine-Med, Inc.
Aug. 2 to Oct. 2
Register

Comprehensive Deep Venous Management is a 2-day course designed to provide physicians and registered vascular specialists with a comprehensive approach to lower extremity deep venous disease from diagnosis to surveillance. Participants will master performance of ilio caval imaging techniques for diagnosis of disease, interpretation of both duplex and IVUS images, as well as clinical and interventional management of obstructive lesions of the IVC and iliofemoral veins.

This course offers a unique opportunity for physicians and their vascular sonographers to train together. A thorough understanding of both roles will exponentially help both providers to grow in their individual positions. The curriculum is designed to provide all attendees with ample time for both didactic and hands-on practice to master the step-by-step duplex ultrasound protocols for both diagnosing iliofemoral disease and stent surveillance. This course is intended to deliver curriculum and hands-on training in an intimate setting with a limited number of participants.
