Optimizing Outcomes in Vascular and Endovascular Surgery:2017

Thursday, April 27, 2017 to Saturday, April 29, 2017
Harvard Medical School & Massachusetts General Hospital
Dec. 1

This is a post graduate course that will provide an extensive examination of topics in vascular disease. Specifically this year it is designed to provide an improved understanding in the evaluations, management and specific treatments of vascular problems with an aim to improve patient outcomes. It will provide a comprehensive review to the care of patients with vascular disease by addressing the pathogenesis, diagnosis, natural history and the effect of treatment options and how they can impact the outcome of this patient population. These topics will be presented by an outstanding faculty of 42 nationally recognized authorities. There will be interactive learning formats such as panel presentations, Q&A and didactic lectures incorporated into the course so that learners may increase their knowledge and competence, leading to improved performance in practice.
